

Understanding Preventive Care Visits aka Well Child Checks

What IS Preventive Care?

Evaluating your current health status when you are “symptom free”

What is NOT Preventive Care?

Treatment for specific health conditions, on-going care, lab or other tests necessary to manage or treat a medical condition

Extra charges can be incurred by:

- 1 - Questions that patients pose about a previously undisclosed health problem during a visit scheduled as preventive
- 2 - A health issue that a doctor discovers during the preventive visit
